		<b>Notes</b>		
1		SABAP2 - Southern African Bird Atlas Project 2.		
2		The pentad is a block of 5 minutes latitude by 5 minutes longitude and the number is the coordinates of the north western corner.		
3		The pentad names were selected by the U3A Stilbaai Bird Group for ease of communication.		
4		This list was copied from the SABAP2 species list for the 75 pentads making up the Hessequa area (see Fig 1) with 1498 full protocol cards on 10 December 2018.		
5		The English and Afrikaans names are the generally accepted names for the species in South Africa and were sourced from Bird Life SA, Trevor Hardaker, BirdLasser and Faansie Peacock's books.		
6		FP RR% (Full Protocol Reporting Rate) gives the percentage of FP cards containing the species. Common species in the area have the higher numbers.		
7		A FP card is the most important way to collect information. It is compiled by intensive observations over a minimum of 2 hours, but all habitats in the pentad should preferably be covered. A maximum of 5 days is allowed per card, after which a new card must be started.		
8		The species in the list is arranged according to "Faansie's Bird Book" as it gives an interesting new perspective to understand groupings.		
9		"F Pg no" is the page number in "Faansie's Bird Book" where the species is illustrated. Where there is no number the species were too rare and thus not included in Faansie's book. Read more about the book at Faansie Peacock's website at <a href="http://faansiepeacock.com/kids-book/">http://faansiepeacock.com/kids-book/</a> but remember, the book is for kids of all ages.		
		<b>Notas</b>		
1		SABAP2 - Suider-Afrikaanse Voëlatlasprojek 2.		
2		Die pentade is 'n blok van 5 minute breedte- by 5 minute lengtelyne en die nommer is die koördinate van die noord-westelike hoek.		
3		Die pentade name is deur die U3A Stilbaai Voëlgroep gekies om kommunikasie te vergemaklik.		
4		Hierdie lys is gekopieër vanaf die SABAP2 spesielys vir die 75 pentades van die Hessequa gebied (sien Fig 1) met 1498 volprotokolkaarte op 10 Desember 2018.		
5		Die Engelse en Afrikaanse name is die wat algemeen aanvaar word vir spesies in Suid-Afrika en die bronne is Bird Life SA, Trevor Hardaker, BirdLasser en Faansie Peacock se voëlboeke.		
6		FP RR% (Full Protocol Reporting Rate) is die persentasie van volprotokolkaarte waarop die spesie aangeteken is. Hoe groter die getal, hoe meer volop is die spesie.		
7		'n Volprotokolkaart is die belangrikste manier om inligting in te samel. Dit word opgestel oor 'n minimum van 2 uur se intensiewe atlas, maar al die habitatte in 'n pentade moet verkieslik gedek word. 'n Maksimum van 5 dae word toegelaat vir 'n kaart, waarna 'n nuwe kaart begin moet word.		
8		Die spesies in die lys is gerangskik volgens "Faansie se Voëlboek" aangesien dit 'n interessante nuwe manier is om groepe te verstaan.		
9		"F Pg no" is die bladsy in "Faansie se Voëlboek" waar die spesie geïllustreer is. Spesies sonder 'n bladsynommer was te skaars om in Faansie se boek opgeneem te word. Lees meer oor die boek op Faansie Peacock se webwerf by <a href="http://faansiepeacock.com/kids-book/">http://faansiepeacock.com/kids-book/</a> maar onthou, die boek is vir kinders van alle ouderdomme.
